

# SABSA Accelerator

Support critical business initiatives with a solid enterprise security solution

## Why the SABSA Accelerator?

- Enables architects to develop a holistic security architecture following mainstream best practice framework
- Helps business stakeholders secure additional help from the IT function by promoting a tight integration with the organization's enterprise architecture strategy
- Reassures management and ensures a higher likelihood of success for company-wide programs by fostering a systematic, transparent and inclusive approach to IT security

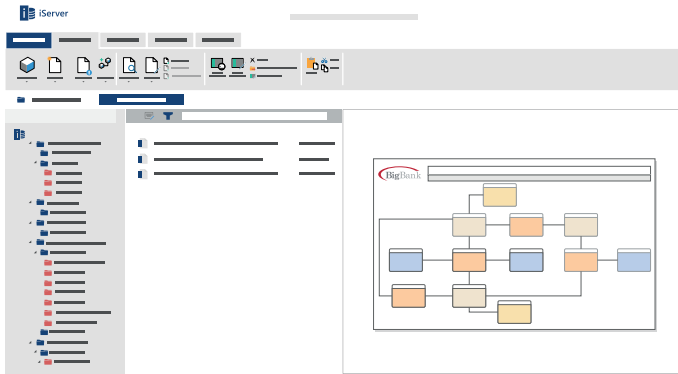

## What Does it Offer?

The SABSA Accelerator is a package containing all the tools required to successfully align an organization's security architecture to the SABSA framework. Instead of wasting time and resources building a SABSA-aligned architecture from scratch, you can opt to receive iServer already aligned to it. This includes a custom SABSA meta-model and repository, templates, documentation, as well as a number of tools that ensure users enjoy a quick start and short Time to Value.

# SABSA Accelerator

## Features

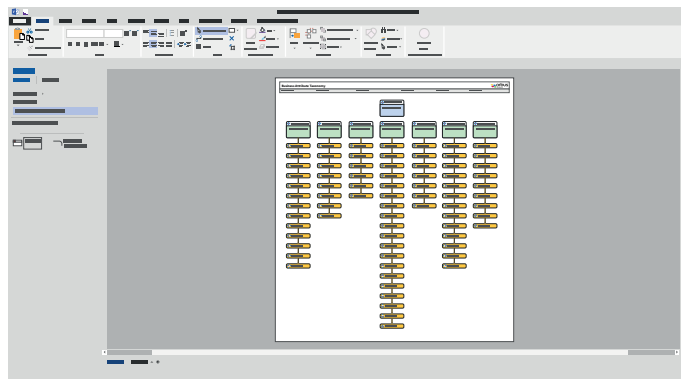

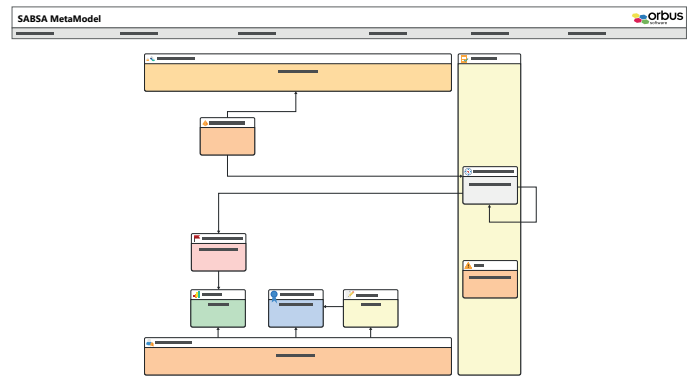

### SABSA-based Repository Structure

The iServer repository folder structure is organized in accordance with the SABSA framework guidelines.

### Custom SABSA Meta-model

iServer comes preconfigured with a custom SABSA meta-model featuring all the objects and relationships described in the specification.

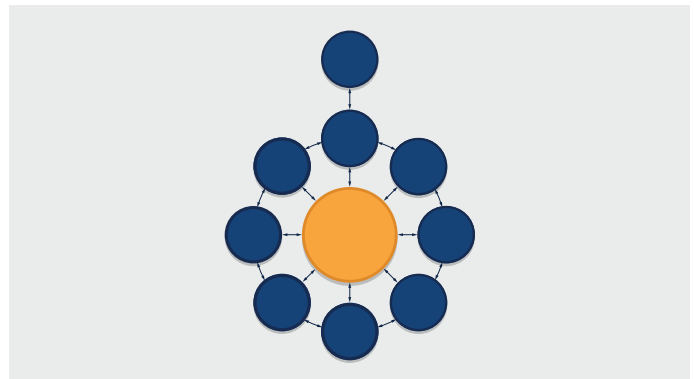

### Preconfigured SABSA Templates & Stencils

Out-of-the-box access to a comprehensive list of SABSA templates and stencils in Visio format.

### TOGAF ADM Alignment

Access to a folder structure that is aligned to the TOGAF ADM phases, with each folder containing the relevant SABSA deliverables, catalogs, and objects.
